

May 2016
v. 1.4

Checkup & Choices (www.checkupandchoices.com) is an established and growing leader in the development and dissemination of digital self-help tools for people with alcohol and drug problems. Our tools face both the consumer and the enterprise, they are undeniably effective, and they have been verified in six randomized clinical trials conducted with over \$4M in competitively awarded grants from the National Institutes of Health (NIH). So if you are interested in helping people AND working with leading-edge technologies, we are looking for an eager and interested developer to be the first full-time member of the technology team. The ideal candidate is a strong technologist with experience in our full stack who is looking to step into a leading or even the lead role.

This is a great opportunity to be a core player for a funded startup, to work directly with the CEO and senior team, and to play a critical role both in handling the day-to-day development, maintenance and operation of the company's core product and in helping to set and execute the company's long-term technology direction.

Our stack:

- Modern Javascript and CSS -- ES6, ReactJS/Redux single-page application
- Python Flask RESTful API
- MongoDB
- Amazon Web Services

To express your interest, or for more information, please email careers@checkupandchoices.com with some or all of the following, and anything else that you think might prove relevant and compelling:

- LinkedIn link
- GitHub link
- Resume
- Code Sample

Thank you.
